

Creative Toolkit & Brand Applications

Design Software Stack, Touchpoints & File Management

PROJECT	TRACE — Understanding Microplastics. Taking Action.
TRACK	Graphic Design
TEAM	Alaa Mosaad · Asmaa Yasser · Zeina Mohamed · Shahd Mahmoud · Abdelrahman Karam · Mohamed Osama
SUPERVISOR	Dr. Suzan Farahat
SOURCE MATERIAL	Project Proposal.pdf, Trace Presentation.pdf (Brand Identity & Strategy Presentation)

Understanding Microplastics. Taking Action.

4.1 Design Software Stack

In a coded software project this section would document the technology stack, deployment diagram, and component diagram. None of those apply here — TRACE is a design system, not a running application — so this section instead documents the creative toolkit used to produce every deliverable, and how the resulting files are organized.

TOOL	ROLE IN PRODUCTION
Adobe Illustrator	Logo construction, vector iconography, print-ready lockups
Adobe Photoshop	Image compositing and photo retouching for mockups and hero imagery
Adobe InDesign	Multi-page layout — this documentation set and the brand guidelines manual
Figma	UI screen design, the mobile app and website prototypes, and design handoff
Midjourney	AI-generated mood and hero imagery (moodboard photography direction)
ChatGPT	Copywriting support and content ideation for taglines and microcopy

4.2 Brand Application Touchpoints

TOUCHPOINT	WHAT WAS PRODUCED
Business card	Front/back design plus an annotated wireframe specification (logo placement, tagline zone, QR code, contact-data blocks).
Mobile app	Six core screens — onboarding, home/learn, scan, take-action, community, profile — as both low-fidelity wireframes and high-fidelity mockups.
Website	Responsive homepage (desktop + mobile): hero, proof-point stats bar, and services grid.
Social media	Instagram feed-grid template set, including bilingual (English/Arabic) post variants.
Merchandise	Tote bag, water bottle, mug, notebook, T-shirt, pin badge, informational cards, and an educational booklet.

TOOLKIT PRINCIPLE

Six tools, one voice — the toolkit's only job is to disappear behind a consistent identity.

4.3 File & Version Management

This section replaces “Version Control & Collaboration” from the standard software documentation guidelines, adapted for a design-only deliverable: there is no source code to branch or merge, but the same discipline of traceable versioning still applies to design files.

- All documentation PDFs and exported final assets are hosted in the team's GitHub repository, per the program requirement that all documents be uploaded to GitHub.
- Working design files are versioned using Figma's native version history; each milestone (§1.2) is exported and archived to the repository at sign-off.
- Naming convention: `trace_[touchpoint]_[version]_[YYYYMMDD]`, e.g. `trace_mobileapp_v3_20260615`.
