SUPERVISOR	Dr. Suzan Farahat
SOURCE MATERIAL	Project Proposal.pdf, Trace Presentation.pdf (Brand Identity & Strategy Presentation)

Understanding Microplastics. Taking Action.

1.1 Project Proposal

OVERVIEW

TRACE is an AI-powered lifestyle and wellness platform concept designed to intercept the microplastics crisis at the consumer level. Positioned as a digital lens rather than a traditional environmental campaign, TRACE makes invisible physical threats in daily life — in water, food packaging, and clothing — visible and manageable. This project's deliverable is the complete graphic design identity and application system for TRACE: brand strategy, visual identity, and the UI/UX design of its key touchpoints (mobile app, website, social media, merchandise, and stationery).

OBJECTIVES

- Translate a technical, anxiety-inducing subject (microplastic exposure) into a premium, empowering consumer brand rather than a guilt-driven eco-NGO aesthetic.
- Design a complete, coherent visual identity system: logo, color palette, typography, iconography, and moodboard.
- Design the core brand touchpoints — mobile app UI, marketing website, social media template set, merchandise line, and business card — as a unified system.
- Validate every design decision against the primary user persona (Shorouk, 24, Cairo) and her budget, trust, and visual-quality expectations.
- Produce a brand guidelines manual so the identity can be applied consistently beyond this project.

SCOPE

In scope (Graphic Design track deliverables):

- Brand strategy documents: problem statement, persona, SWOT analysis.
- Visual identity: logo exploration and final mark, color system, typography system, moodboard.
- UX/UI design of the mobile app flow (wireframes and high-fidelity screens), website, and social media templates.
- Applied design collateral: merchandise set and business card.
- Supporting documentation: this project documentation set and the brand guidelines manual.

Out of scope (not applicable to the Graphic Design track):

- Functional software implementation — no working app, backend, or AI scanning model is built; the mobile app and website are designed as static UI mockups and prototypes.
- Database design, system architecture, and API development.
- Production manufacturing of physical merchandise.

Because this is a Graphic Design track project, the sections of the program's Project Documentation Guidelines that assume a coded software system — system architecture, database design, data-flow/sequence/class/state diagrams, source code, and

deployment — do not apply and have been intentionally omitted from this documentation set. Sections that translate naturally to a design project (planning, requirements, UX/UI design, QA, and final reporting) have been kept and adapted.

1.2 Project Plan — Timeline & Milestones

Milestones follow the Student-track deadlines published in the program's Project Documentation Guidelines, re-scoped to the deliverables this track actually produces.

PHASE	MILESTONE	DEADLINE
Project Planning & Management	Proposal, timeline, roles, risk plan, and KPIs finalized	2/20/2026
Research & Requirements	Persona, SWOT, stakeholder analysis, and requirements finalized	4/20/2026
Design Analysis & UX/UI Design	Moodboard, wireframes, and brand direction locked	5/1/2026
Design Production	Final logo, color/type system, and all touchpoint mockups produced	6/25/2026
Final Presentation, QA & Reports	Brand guidelines manual, design QA audit, final report, and presentation delivered	6/30/2026

1.3 Task Assignment & Roles

NAME	ROLE	RESPONSIBILITIES
Dr. Suzan Farahat	Supervisor	Direction approval, milestone sign-off, academic guidance
Alaa Mosaad	Research & Analysis	Persona research, SWOT analysis, competitive/market scan
Asmaa Yasser	Content Strategy	Taglines, microcopy, social captions, bilingual messaging tone
Zeina Mohamed	Visual Design	Logo development, moodboard, color & type system, mockups
Shahd Mahmoud	UX & Experience	App flow architecture, wireframes, usability review
Abdelrahman Karam	Data & Insights	KPI definition, in-product data displays, stats sourcing
Mohamed Osama	Product & Operations	Toolkit coordination, file/version management, timeline tracking

1.4 Risk Assessment & Mitigation Plan

Risks are carried forward from the project's SWOT analysis (Weaknesses and Threats), reframed here as design and delivery risks with concrete mitigations.

RISK	IMPACT	MITIGATION
“Anxiety-uninstall” — the subject matter reads as alarming and users disengage	High	Empowerment-over-guilt tone across all copy; every warning is paired with a free or low-cost action (“Every action counts” messaging).
Credibility risk if AI-scanning claims are overstated in the design copy	High	Copy uses qualified language (“estimated”, “detected”) instead of absolute claims; consistent iconography avoids implying false precision.
Behavioral friction — asking users to change daily habits is hard	Medium	Micro-habit framing in the app (single, specific swaps) rather than broad lifestyle overhauls; community stats add social reinforcement.
Economic sensitivity of the target persona (entry-level income, budget-conscious)	Medium	Content strategy foregrounds free/ultra-low-cost swaps; visual tone stays premium without implying expensive products are required.
Brand tone risk — could read as another dry environmental NGO	Medium	Biohacking/wellness-tech visual language (moodboard, iconography, typography) deliberately distances TRACE from NGO aesthetics.
Team coordination / timeline slippage across 7 contributors	Medium	Named task ownership per role (§1.3), milestone checkpoints with supervisor sign-off at each of the five project phases.

DESIGN MANDATE

“Empowerment over guilt” isn't just a tone note — it's the constraint every deadline, risk, and KPI in this plan is checked against.

1.5 KPIs (Key Performance Indicators)

As a design-track project, KPIs measure design quality, consistency, and audience fit rather than software performance metrics.

KPI	TARGET
Brand consistency score	Identity (logo, color, type) applied without deviation across $\geq 95\%$ of touchpoint mockups
Design review approval rate	$\geq 80\%$ of deliverables approved by the supervisor on first review
Accessibility compliance	100% of UI mockups pass WCAG AA color-contrast minimums
Persona-fit score	Average reviewer rating $\geq 4/5$ against Shorouk's stated pain points and needs
Milestone on-time delivery rate	100% of the five phases in §1.2 delivered by their planned deadline
App flow efficiency	Each core user story (§2.2) resolves in ≤ 4 taps in the wireframed flow
