Understanding Microplastics. Taking Action.

2.1 Stakeholder Analysis

STAKEHOLDER	TYPE	NEEDS & EXPECTATIONS
Shorouk (24, Cairo) — primary user persona	Primary / external	A transparent, science-backed tool that fits a tight budget; visual clarity over dense technical detail; a brand she can trust not to greenwash.
Dr. Suzan Farahat — Project Supervisor	Internal / evaluator	Coherent design rationale, milestone documentation, and a deliverable set that meets the program's Graphic Design track requirements.
Project team (7 members, \$1.3)	Internal / executors	Clear task ownership, a shared brand system to design against, and an agreed timeline.
Sustainable creators & potential brand partners (SWOT opportunity)	Secondary / future	A visually credible, premium identity worth collaborating with or piloting a “Microplastic-Free” certification program against.

PRIMARY PERSONA — SHOROUK, 24, CAIRO

“She knows her tap water might be contaminated, but she lacks the tools to measure the exact severity or know what to tackle first.”

2.2 User Stories & Use Cases

Derived from the designed mobile app flow (Learn → Scan → Take Action → Community):

- As a new user, I want an onboarding screen that quickly explains what microplastics are, so that I understand the app's purpose before creating an account.
- As Shorouk, I want to scan a product, clothing tag, or food/water container, so that I can see whether it might shed or leach microplastics.
- As a budget-conscious user, I want the app to suggest free or ultra-low-cost habit swaps (e.g. “wash this polyester shirt on a cold cycle”), so I can act without buying expensive alternatives.
- As a user, I want a personal “Body Burden Estimator” score broken down by lungs, water, food, and lifestyle, so the risk feels specific and actionable rather than abstract.
- As a community-minded user, I want to see collective impact stats (members, events, actions taken) and upcoming local events, so I feel part of a larger movement rather than acting alone.
- As a returning user, I want a persistent bottom navigation (Home / Learn / Community / Profile) with a central scan action, so the core actions are always one tap away.

2.3 Functional Requirements

The brand system must include the following designed deliverables:

- Primary logo and icon-only lockup, with correct rendering of the English wordmark.
- A defined color palette with hex values specified for both print and digital use.
- A typography system with a display face and a text face, each with defined weights.
- A moodboard documenting visual tone, texture, and iconography direction.
- A mobile app UI set covering onboarding, home/learn, scan, take-action, community, and profile screens.
- A responsive website homepage design (desktop and mobile).
- A social media template set, including bilingual (English/Arabic) post variants.
- A merchandise application set: tote bag, water bottle, mug, notebook, apparel, pin badge, and informational cards.
- A business card design (front and back) with an annotated wireframe specification.
- A brand guidelines manual documenting correct usage of the above.

2.4 Non-Functional Requirements

- **Bilingual support:** core touchpoints (business card, merchandise, social media) must typeset both English and Arabic correctly.
- **Accessibility:** text/background color pairs must meet WCAG AA contrast minimums on both light and dark app surfaces.
- **Cultural fit:** persona and lifestyle imagery must represent the target audience authentically rather than generically.
- **Tone consistency:** every touchpoint maintains the “empowerment over guilt” positioning — no guilt-tripping copy.
- **Scalability:** the logo/icon system must stay legible from favicon size (16px) up to signage scale.
- **Perceived performance:** each core user story in §2.2 should resolve within the wireframed flow in a low number of screens/taps to reduce behavioral friction.
- **Brand safety:** any claim about AI-scanning accuracy in the copy must be qualified rather than absolute, to avoid overpromising a capability this design-track project does not actually build.
